

ABSTRACT OF THE DISCLOSURE

An electronic control unit (ECU) includes onboard type electronic components and non-onboard type electronic components inside an aluminum case. The ECU has a circuit board for mounting the onboard type electronic component in a first portion of a bottom surface, and a concavity for installing the non-onboard type electronic components in a second portion of the bottom surface. A resinous frame is provided in the concavity to house and hold the non-onboard type electronic components.
